

Giganet integrated monitor touch pad for environment monitoring in the edge sever room uses a 9.7-inch touch screen, which can be used for work through the touch pad, and the inconvenience brought by the traditional 1U monitoring host in the edge server room and other application scenarios is abandoned. In the era of big data, it is the best choice for building a modern unguarded server room to meet customers' requirements of convenient installation, saving cabinet space, local visualization, convenient operation, necessary security and linkage operation, etc.

FEATURES

- Embedded installation, simple, convenient management.
- Has rich interface, which can realize fast data acquisition and processing.
- 9.7 -inch capacitive screen, good man-machine interface and touch performance.
- Front-facing camera, the camera records operator.
- Manageable smart devices and temperature and humidity environment.
